

Ustream Video – How to set up Picture in Picture

- To use some of the more advanced features of Ustream you need to download Producer or Procucer-Pro.
- Ustream Producer is free and Producer Pro is about \$200.
- Here's how to get Producer
- Go to www.ustream.tv
- Go to the bottom of the page and click on [Products & Services](#)

Download Ustream Producer and follow the installation instructions

Hook up your camera and open Ustream Producer. If everything is working correctly you should see a screen showing your camera feed.

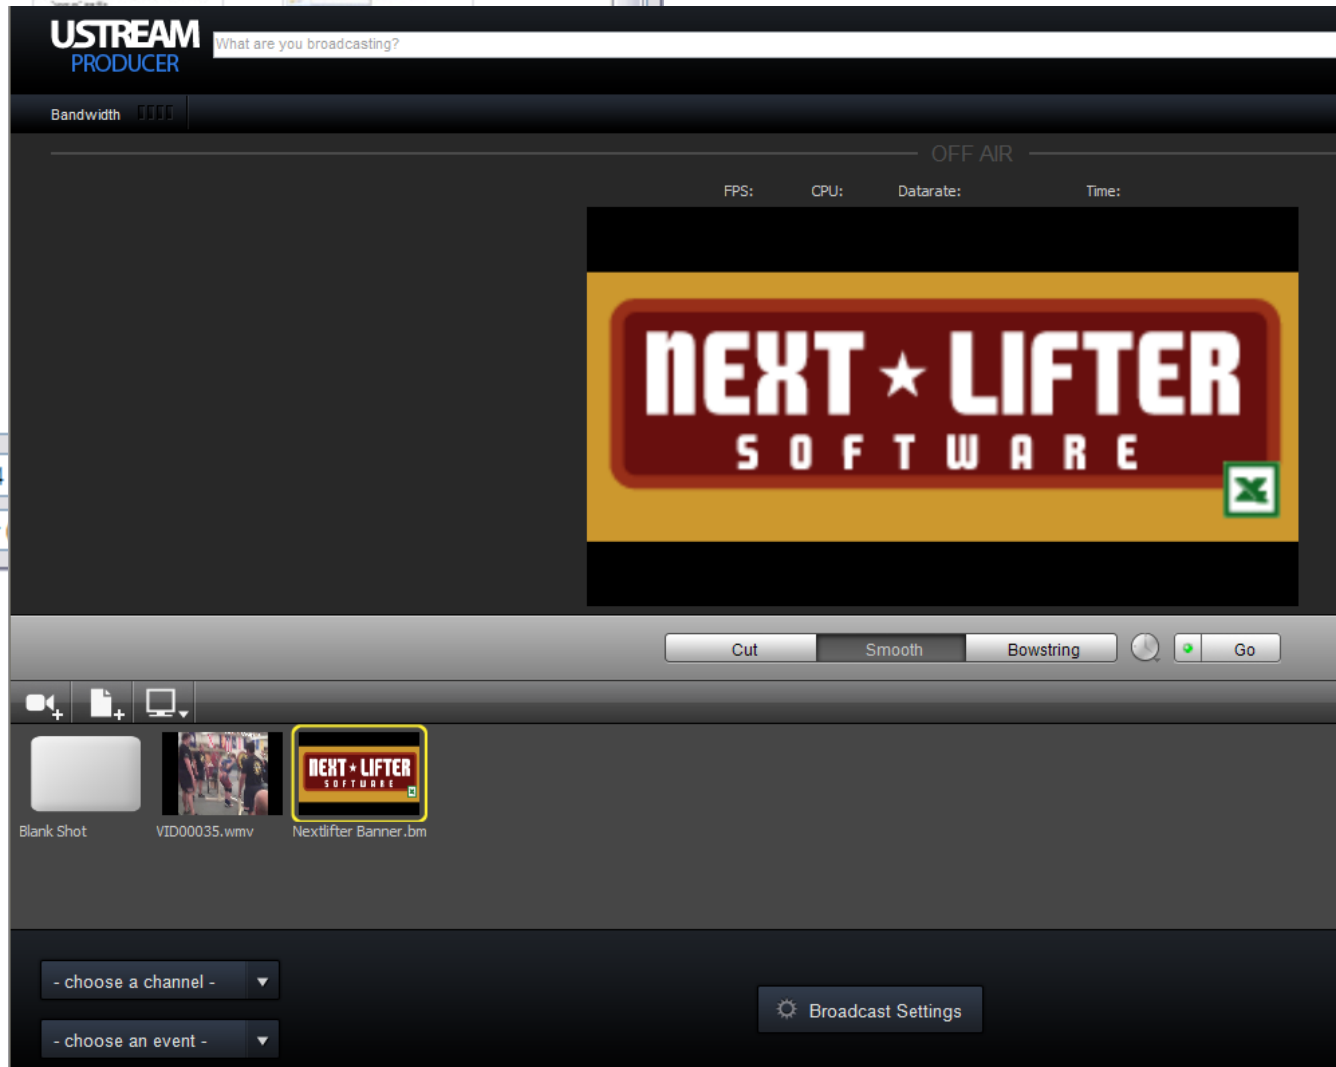

- To get “picture in picture” we need a second shot.
- Click on the page icon and select **Add Picture Shot.**

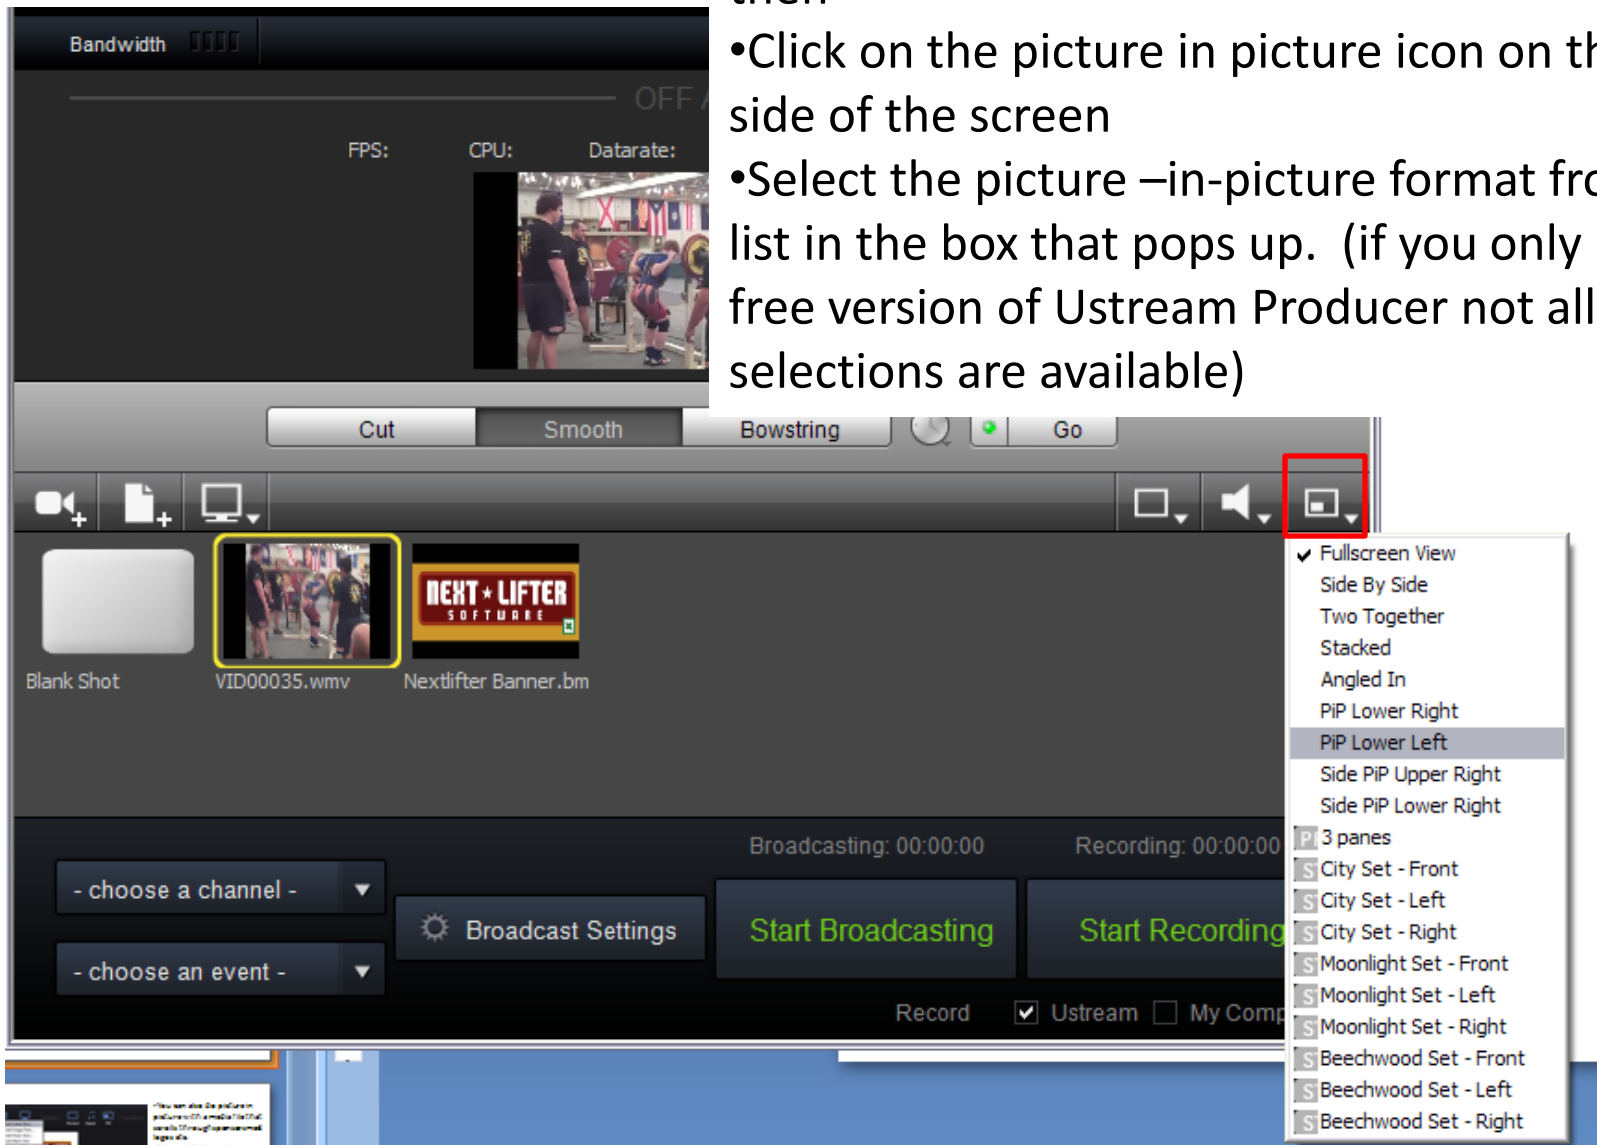

- Find the image file you want to add to your broadcast.

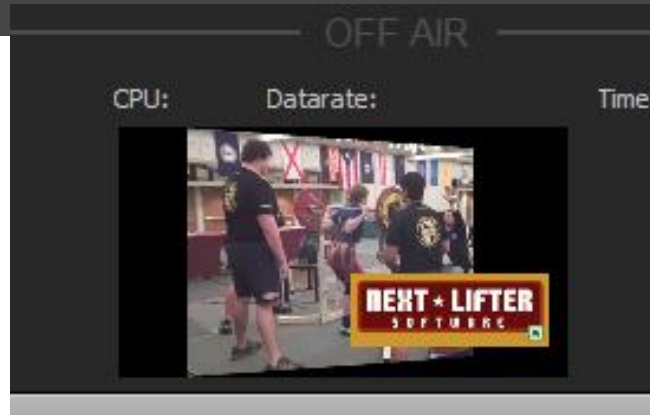

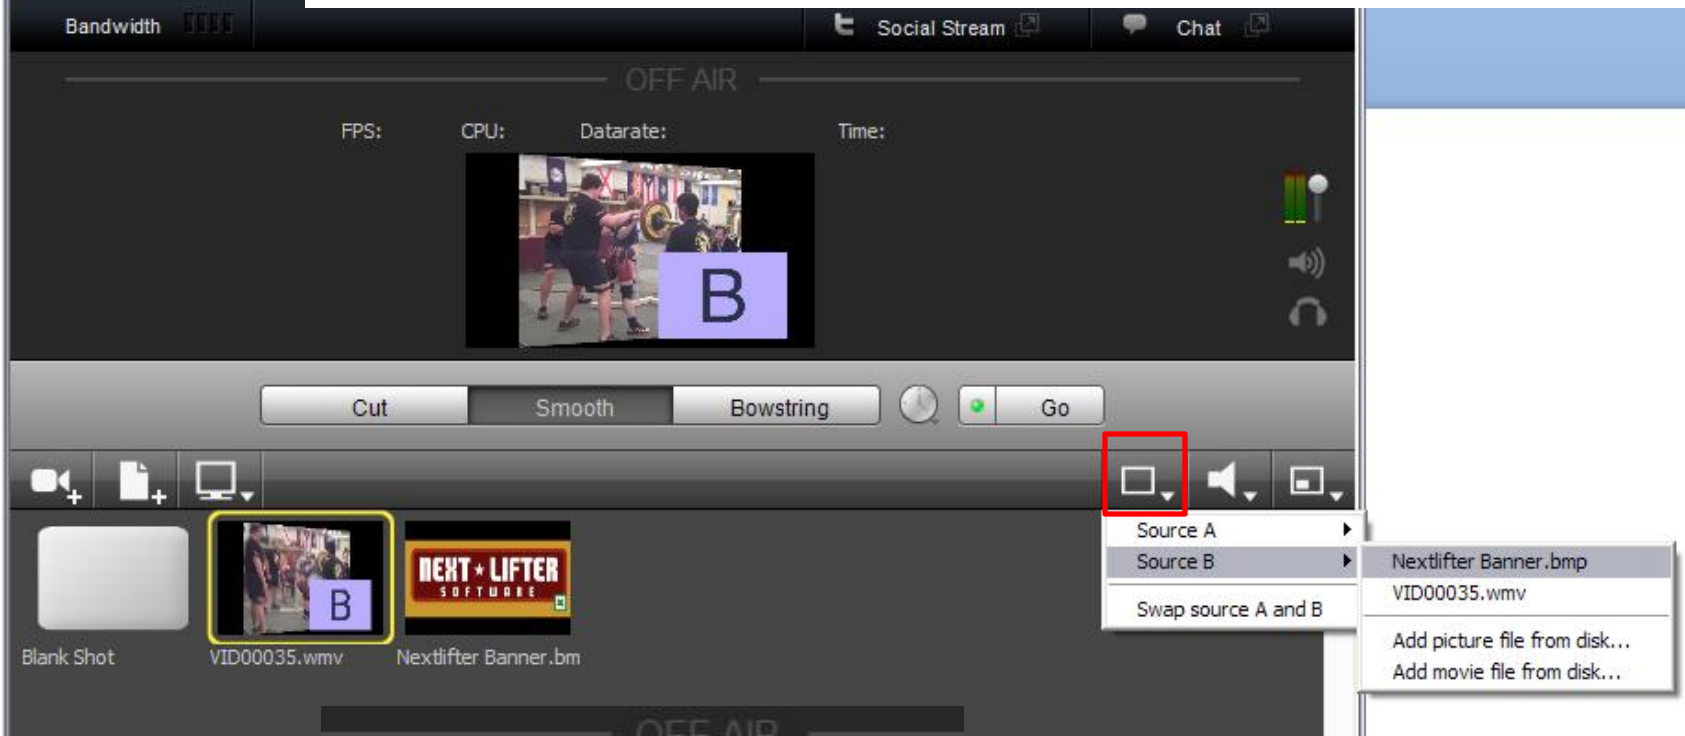

- Click on your image file and it will be loaded into Ustream.

- Click on your camera feed in the lower frame then
- Click on the picture in picture icon on the right side of the screen
- Select the picture –in-picture format from the list in the box that pops up. (if you only have the free version of Ustream Producer not all the selections are available)

- You will see a blank screen area pop up in your video feed (it could be A or B). You can select the picture shot from the menu or go to your disk and find another picture or even a video file.

- You may need to adjust your camera so the picture in picture doesn't obscure the Live action.
